## HISTORY

After 10 years in the sector and founded in 2003, Interior Architecture ACTUALIA S. L. was born of the need of full customization and integral management in retail for the food sales business sector. This step was produced by the closing of the agreement of exclusive distribution of CRUZ S. L. showcases for the Spanish territory.

In 2014, in the midst of global economic contraction and as a result of the constant search for improvement in the **QUALITY** of the product and in the **SERVICE** offered by ACTUALIA S.L., we proceeded to the design and construction of prototypes for testing of a new typology of showcases that technically exceeded all the machinery existing to date in the market.

Once the showcases were built, the prototypes were then checked by the professionals of the sector who corroborated their quality, after which began the procedure of registering appropriate patents that were approved on a world title by the end of 2015.

Granted the industrial protections provided by its patents, Interior Architecture ACTUALIA S.L. began the commercialization of **AUGUSTA** showcases to bring technology to this market, energy efficiency, work ergonomics, technical safety as well as design for the 21st century.

### TECHNOLOGY

The **AUGUSTA** showcases are manufactured with the latest construction methodologies and applies all the knowledge acquired by our technical staff during more than 30 years of experience in the sector.

Built as a result of the technical studies that earned us a world patent, our showcases are now the only ones that can guarantee the homogeneity of temperatures over the entire area of the product exposure, an indispensable condition for good conservation.

## ERGONOMICS AND DESIGN

The **AUGUSTA** showcases, even with a width of 1 meter in the display tray allow for ease of work as an asymmetric exterior envelope reduces the distance from the supporting points of the belt to the border of the tray, and thus achieves greater work ergonomics.

The **AUGUSTA** showcases ensure the fastest cleaning and product removal time since they hold a world patent regarding the glass opening system for better access from the front of the showcase. At the same time, the **AUGUSTA** showcases allow, once the product is removed from the exhibition, for cleaning with a water hose throughout the exhibition base without the need to move any element of the showcase itself.

The polyester construction of the **AUGUSTA** showcases allow for maximum adaptation in terms of design, with different kinds of glass of differing heights, different opening systems, options of exterior finishes and shapes (straight, curves, wood, ceramic, metal), colors for both interiors as exteriors.

### MODULARITY

Constructively, the **AUGUSTA** showcases, when made to measure, allow for the development of any kind of form and so achieve the most efficient use of space for your premises, thus seeking the maximum commercial performance of your business.

Looking for this optimization **AUGUSTA** showcases have on their model of static cold as well as on the model of forced air, a refrigerated exposition of 1 meter large which is scalable, adaptable and easy to configure (not fixed) making it easier to place these model generations, depending on their shape.
